Front, Rear and Driver-Monitoring Cameras

Vehicle and driver safety

Dual STARVIS™ sensors in Full HD 1080p (front 60 / rear 30 frames per second / 139° view angle) + HD 720p (10 frames per second / 54° view angle) interior infrared camera with Sony CMOS sensor.

The back-illuminated STARVIS image sensors capture clear details in both shadows and highlights thanks to high sensitivity and wide dynamic range. With its infrared illumination LEDs, the Driver-Monitoring Camera can monitor the driver day and night and alert of drowsiness or distracted driving.

Native Parking Mode with built-in voltage monitor to protect your vehicle battery (hardwiring cable included).

With the **free BlackVue Cloud service**, check on your car from anywhere, anytime.

Driver-Monitoring Camera

The infrared Driver-Monitoring Camera (DMC100) is designed to improve driver's safety by helping prevent risky driving behaviors. The DMC100 monitors the driver at all times. Its algorithm can detect statuses such as:

- Distracted driving
- Drowsy driving
- Driver detected/undetected

As soon as a potentially dangerous situation is detected, the DMC100 emits a beep to alert the driver and triggers push notifications if connected to the Cloud.
