

FLIR PathfindIR Full-Featured Stand-Alone kit (Domestic)

Price: **\$3495.00**

 manufacturer
NAV-TV

 ID SKU NTV-KIT153

 weight
2.00 Lbs

The PathFindIR system is designed for simple, intuitive operation. The PathFindIR camera is a sophisticated thermal sensor that converts thermal content (heat) of a scene into a 2-dimensional image for display on a video monitor inside your vehicle.

Different than visible light cameras, thermal imagers do not display reflected light as seen with human eyes. Rather, thermal imaging cameras only 'see' temperature differences which are converted into shades of grey, from black to white. The PathFindIR camera displays cold objects as black and hot objects as white.

The image from this camera can be 'colorized' with the addition of the FLIR FF controller (NTV-KIT491)
