DR650S-2CH TRUCK

The Best Dashcam for Trucks and Heavy Vehicles

The DR650S-2CH TRUCK is ideal to secure most large commercial trucks. The waterproof infrared rear camera connects to the front unit via a 20m video cable. This allows to monitor not only the road behind, but also cargo loading and unloading operations.

#1 Dashcam For Heavy Vehicles BlackVue DR650S-2CH TRUCK

DR650S-2CH TRUCK features Full HD front camera and waterproof rear camera with embedded IR light to fit externally on the back of trucks and most commercial vehicles. Perfect dashcam for fleet management.

Waterproof, with Embedded Infrared Lights

The rear camera is completely waterproof, with a sturdy metal frame.

The luminosity sensor in the rear camera detects ambient brightness, activating automatically the six IR lights to identify vehicles and objects even in the dark.

Waterproof Coaxial Cable

The 15m (and optional 20m) high-quality waterproof coaxial cable is ideal for trucks and trailers and guarantees a pristine image even over long distance.

Built-in Wi-Fi and GPS

Built-in Wi-Fi allows you to connect to the dashcam via the free Blackvue app on your smartphone or tablet to set up your dashcam or transfer videos to your device without taking out the micro SD card. It also lets you enjoy the free add-on service [BlackVue Over the Cloud](#). The built-in GPS tracks vehicle location and speed and lets you visualize your route on a map while watching the videos in the free viewer application for Windows/Mac.

Built-in Impact & Motion Detection

Built-in impact and motion detection enable your BlackVue to switch between 3 different recording modes (Normal/Event/Parking) automatically depending on the circumstances.

Videos files are marked accordingly so that you can easily find relevant ones with the BlackVue Viewer.

Loop recording: Your BlackVue automatically writes over the oldest files when the memory is full.

TAMPER-PROOF CASE (OPTIONAL)

The BlackVue Tamper-Proof Case is a security accessory for BlackVue DR650S Series dashcams. It blocks physical access to the microSD card slot, and prevents unplugging the power and coaxial cables, thus highly reducing risks of data tampering.

BlackVue App (iOS, Android) and Viewer (Windows/Mac)

Both the BlackVue App and Viewer are free to download and use.

They let you easily change your BlackVue configuration settings and browse through your videos in an intuitive way.

With the BlackVue App, connect to your BlackVue in Wi-Fi to access files and check realtime Live View for easy setup of your dashcam.

Enjoy **Two-way Voice Communication** with the driver from the app through the BlackVue's integrated speaker and mic. Check the BlackVue Over the Cloud page for more information

Intelligent Parking Mode monitoring

with the optional Power Magic Pro or Power Magic Battery Pack

Rest easy, knowing that your car is being monitored while you are away.

BlackVue automatically switches to Parking Mode to monitor your parked vehicle, but only writes to the memory card when something happens (motion or impact detected), which has two benefits:

- Less chance for important files to be overwritten during long Parking Mode sessions.
- Extended memory card lifespan in the long run.

Additionally, the DR650S Series features **Voice Notifications** in case of Parking Mode Event recordings. Upon switching from Parking to Normal Mode, your BlackVue will alert you if an Event was recorded while your vehicle was parked. This way, you can check the recordings right away and back up important files to your phone or the Cloud if necessary. It might also alert you of possible damage to your vehicle that you did not notice at first.
