DR430-2CH

The **BlackVue DR430-2CH** (HD + HD) brings you the BlackVue quality at the best price.
It is a dual-channel dashcams that records the front and back or interior of your vehicle simultaneously.
The unit utilizes a very compact design, with the front camera almost invisible to the driver's eye, letting you focus on the road, knowing that you are protected.

Dual-channel dashcamS

DR430-2CH: HD (front) + HD (rear).
The DR430-2CH records audio and fluid videos at 30 frames per second. The front camera unit does all the processing and stores videos in a microSD card. The rear camera, which connects to the front unit by way of a high-quality coaxial cable, can alternatively be used to record the interior of the vehicle.

Built-in Impact & Motion Detection

Built-in impact and motion detection enable your BlackVue to switch between 3 different recording modes (Normal/Event/Parking) automatically depending on the circumstances.
Videos files are marked accordingly so that you can easily find relevant ones with the BlackVue Viewer.
Loop recording: Your BlackVue automatically writes over the oldest files when the memory is full.

BlackVue Viewer (Windows/Mac)

The BlackVue Viewer is free to download and use.
It lets you easily change your BlackVue configuration settings.
Displays videos chronologically and by type (Normal/Event/Parking) to quickly identify and archive important footage.

Security-Enhanced Design

The full matte black body blends into any vehicle's interior with discretion, and the lockable microSD card slot provides additional protection against data tempering.

GPS receiver

Add geolocation and speed data to your videos.
Visualize your route on a map with the free BlackVue Viewer.

Intelligent Parking Mode monitoring

with the optional Power Magic Pro or Power Magic Battery Pack.

Rest easy, knowing that your car is being monitored while you are away.
BlackVue automatically switches to Parking Mode to monitor your parked vehicle, but only writes to the memory card when something happens (motion or impact detected), which has two benefits:

- Less chance for important files to be overwritten during long Parking Mode sessions.
- Extended memory card lifespan in the long run.
