DR750S-1CH

The single-channel Cloud dashcam of reference.

The Full HD Sony STARVIS™ image sensor gives you best image quality under any light. Also included are GPS logger, Wi-Fi, Cloud connectivity, impact and motion detection. All this in a stealthy design that never gets in the way of your driving.

No need for a screen: with the free BlackVue app, connect to your dashcam whenever you want.

FULL HD CLOUD DASHCAM

PERFORMANCE AND FUNCTIONALITY

Sony STARVIS™ sensor with Full HD 1080p at up to 60 frames per second.
Record fluid videos at a wide 139° view angle.

STARVIS imaging sensors are the benchmark in video clarity under low light, and the one equipping the DR750S-1CH is no exception. You can rest assured that your dashcam will capture critical details whether you are driving or letting your BlackVue monitor your parked vehicle.

With the free Over the Cloud add-on service, check on your car from anywhere, anytime.

BUILT-IN IMPACT & MOTION DETECTION

MARK IMPORTANT FILES AND ENABLE PARKING MODE

While driving, your BlackVue detects impacts and sudden changes in speed. While parked, it also detects movements*.

Videos files are marked accordingly so that you can easily find the relevant ones in the BlackVue Viewer for Windows and Mac OS or the BlackVue App for Android and iOS.

(* For Parking Mode recording, an external battery pack (Power Magic Battery Pack) or a hardwiring kit (Power Magic Pro) is required.

BLACKVUE APP (IOS, ANDROID) AND VIEWER (WINDOWS/MAC)

EASILY MANAGE YOUR VIDEO FILES

Both the BlackVue App and Viewer are free to download and use.

They let you easily change your BlackVue configuration settings and browse through your videos in an intuitive way.

With the BlackVue App, connect to your BlackVue in Wi-Fi to access files and check realtime Live View for easy setup and positioning of your dashcam.

SLEEK DESIGN AND CONTROLS

MULTIFUNCTION BUTTON AND CUSTOMIZABLE PROXIMITY SENSOR

BlackVue DR750's stealthy design incorporates easy access to useful functions.

Proximity sensor: toggle audio recording ON and OFF by simply waving your hand in front of it. The sensor can also be configured to trigger Manual Event videos in the settings.

Wi-Fi button: turn Wi-Fi ON/OFF (short press), reset your Wi-Fi password (hold until voice prompt, then short press) or format the microSD card (hold until voice prompt, and then hold again). All actions are confirmed by a voice prompt.

BUILT-IN WI-FI AND GPS

The GPS adds location and speed data to your videos.

Speed: speed data will be overlaid in the video (can be turned off in the settings).
You can choose to display the speed in Kilometers per hour (Km/h) or Miles per hour (Mph).

Location: you can visualize the location of your vehicle in the BlackVue Viewer's Map during video playback.

Wi-Fi lets you connect to your BlackVue with a smartphone or tablet. Wi-Fi also lets your BlackVue connect to BlackVue Over the Cloud via any home or mobile Wi-Fi hotspot (router).

OPTIMIZED FILE MANAGEMENT

Event Files Overwrite Protection:

Dashcams record in a loop, overwriting older files when the memory is full. BlackVue DR750S-1CH can prevent Event files (triggered manually or by impacts) overwriting. Up to fifty (50) files can be protected this way. You can choose to allow new Event files to overwrite past Event files, thus keeping the latest fifty.

Adaptive Format-Free File Management

Developed by BlackVue, this file system improves recording stability and reduces the need for microSD card formatting, while giving you the flexibility to change recording time unit (1/2/3 minutes) and quality settings. Still, the videos saved are playable on most viewers.

Scheduled Reboots (see Parking Mode section below)

HIGH FRAME RATE FOR EXTRA FLUIDITY

THE ADVANTAGE OF 60FPS VIDEO CAPTURE

Your BlackVue records extra fluid videos at 60 frames per second, keeping all details sharp even in fast action. With 60fps, motion blur is much reduced compared to 30fps. That means your BlackVue can better capture details—like license plates—even in fast-moving objects.

Note 1: the higher the image quality setting, the higher the bitrate and the bigger the file size. A bigger size will increase the time necessary to transfer a video file over Wi-Fi.

Note 2: Remote Live View using BlackVue Over the Cloud is not affected by the image quality and framerate settings.

BLACKVUE OVER THE CLOUD

ME AND MY CAR. CONNECTED.

Connect to your BlackVue anytime, from anywhere in the world with BlackVue Over the Cloud.

Enjoy **remote Live View** and **Push Notifications** to your phone.

Back up important videos to the free Cloud storage.

Play and download videos from your dashcam's memory or the Cloud from anywhere.

Enjoy **Two-way Voice Communication** with the driver from the app through the BlackVue's integrated speaker and mic.
