4K ULTRA HIGH DEFINITION CAPTURE

ULTRA-CRISP VIDEOS, NOT JUST ON 4K MONITORS

4K is a much bigger jump in fidelity over Full HD than Full HD over HD. HD to Full HD represents a doubling in pixels. 4K UHD is four times as many pixels as Full HD. This is a huge difference, and it shows. License plates can be made out more clearly and from further away. Besides, you don't need a 4K monitor to appreciate 4K videos. Even on a Full HD monitor, you can zoom in much further without any visible pixilation.

**HD = 1280x720 pixels (0.92 million pixels);
Full HD = 1920x1080 (2.07 million pixels) = 2.25 x HD pixel count
4K UHD = 3840x2160 (8.29 million pixels) = 4 x Full HD or 9 x HD pixel coun*

INFRARED INTERIOR CAMERA

WIDE ANGLE AND CLARITY IN THE DARK

The Infrared Camera secures the interior of your vehicle. The inconspicuous infrared LEDs automatically activate based on the ambient light. The camera's spectacular **clarity even in pitch black lighting** conditions will procure peace of mind to taxi and rideshare drivers. With its **wide 145-degree view angle**, the camera covers most of your vehicle's interior. Using the BlackVue App or Viewer, you can further customize the way it operates.

- 180° Image Rotation to accommodate your setup: if the image comes out upside down, just activate this feature and it will fix the image orientation.
- Security LED ON/OFF (for stealth in Parking Mode)
