Discover the 4K difference

4K in a dashcam is not a gimmick. It is a game-changer.

It is not about playing videos on a giant screen—although you could do that too. It's about providing video proof.

A dashcam is only as good as its ability to capture crucial details—usually license plate numbers.

The 8-megapixel 4K UHD sensor does just that by capturing 4 times as many pixels as in Full HD.

And with its fast shutter speed, details are frozen in place.

Just pause and zoom in.

Capture everything front and rear■

Front camera: 8 megapixels CMOS sensor recording in 4K Ultra High Definition (3840×2160) at 30FPS.

Rear camera: 2.1 megapixels Sony STARVIS™ recording in Full HD (1920×1080) at 30FPS.

The front camera's ultra-wide 162-degree angle takes full advantage of the 4K UHD resolution. The rear camera records in Full HD at a 139-degree angle with outstanding low-light sensitivity.

Native Parking Mode with built-in voltage monitor to protect your vehicle battery (hardwiring cable included).

With the free BlackVue Cloud service, check on your car from anywhere, anytime.
